

AMENDMENTS TO THE CLAIMS:

Claims 1-2 (canceled)

Claim 3 (new): A massaging device structure having a tubular body containing a lotion, with an outlet end head at one end of the tubular body and a massaging end at other end, characterized in that a flow tube is mounted within the outlet end head and is connected to the interior of the tubular body, an outlet end of the tubular body is provided with an elastic valve plate, the inner edge of the lower section of the tubular body is provided with a positioning screw element by means of an engaging ring face, the positioning screw element is protruded with a ratchet teeth face which is mounted with a ring element having a bottom end mounted to the inner bottom portion of the massaging end, and a positioning rod protrudes from the massaging end and is inserted into a hollow slot of a pushing rod to allow pushing rod to be rotated, the ratchet teeth face of the ring element and the ratchet teeth face of the positioning screw element are in engagement such that when the pushing rod is rotated to move up to discharge a solution, the valve plate is retracted and a fixed amount of lotion is squeezed out, when there is no squeezing action, the valve plate is restored to its position sealing the outlet.

Claim 4 (new): The massaging device structure as claimed in claim 1, wherein the cross section of the positioning rod is similar to the shape of the hollow slot of the pushing rod and with similar or corresponding engaging side face.
